

Before you submit your final manuscript, please check the following points [one may add few more] –

1. Have you attended ALL comments from the reviewers?
2. Have you format your paper exactly as the IEEE conference template?
3. Have you put all authors properly and sequentially, upon all of their formal approvals to submit the paper? Make sure that a name means – just a name. No ‘Dr./Prof./GraduateStudent/etc. in the names or affiliations.
4. Affiliations mean – the Dept./ Address/ Institutes. Make sure that you add at least an email address of the corresponding author. It is recommended.
5. Abstract: Is it concise and accurate and within the word limits as mentioned in the template? Usually 150~200 words.
6. Are you sure that no part of this paper is copied from other sources?
7. Make sure that you did not do any plagiarism or self-plagiarism.
8. Make sure that ALL images/illustrations are from you and drawn by you [even if you want to redraw from another document, make sure that you give reference properly]. Do not just download from a website/paper and put in the paper. Try to redraw in higher-resolution and use less color. Make sure that texts within an image are clear and font sizes are proper. See the instructions on images from respective website [e.g., IEEE].
9. Make sure that you explain your works as details as possible.
10. Make sure that there is no formatting problem, no typo/spelling Mistakes, no problems on proper punctuations, no mixed fonts, and make sure that all sections/subsections/FigureNumbers/TableNumbers/References, etc. are properly serialized and marked.
11. Write professionally – as much as possible. If English is not your Native Language, try to check the script with someone who is very good at English. Make sure that your language is clear and easy to understand.
12. Make sure that there are no unnecessary issues in your paper.
13. Make sure that you conclude the paper properly. Do not just copy the core part of Abstract as Conclusion. Rewrite and explain your works and results.
14. In Acknowledgement, make sure that you do it properly – but do not write too much.
15. Make sure that all references are 100% cited within the paper. And all references are fully-written as per the IEEE reference style. Do not mix up. Try to put references from quality journals or conferences.
16. If you refer a weblink, make sure that you put access date and a title of the site. See the instructions for details.
17. And make sure that you do not mention any fancy-words without any in-depth experimentation and mathematical foundations.
18. Remember that if your paper is well-read, it will have more readers and useful.
19. Make sure that your contribution of your paper is crystal-clear – no need to write wrong words/comments.

This is written just very quickly. I missed some points - I will add later and others may advise me to improve the doc.

Good luck. Be honest and work hard.

Best regards

Md. Atiqur Rahman Ahad

EEE, University of Dhaka, Bangladesh
